

ANSHUL JOSHI

Bengaluru, India | +91 7297091996 | hianshul05@gmail.com | [linkedin.com/in/anshul-joshi-ai](https://www.linkedin.com/in/anshul-joshi-ai) | github.com/anshul009-18 | aanshulportfolio.netlify.app

Summary

AI Developer at Examon AI (Singapore) building agentic LLM systems, prompt pipelines, and voice agent solutions. Shipped production RAG pipelines, exam-generation workflows, and ETL systems processing 100K+ records. Strong intuition for how language and framing shape model behaviour—developed through obsessive prompt iteration on real failures. Native Hindi speaker with deep sensitivity to tone and multilingual nuance; eager to build voice agents that sound genuinely human across India’s linguistic landscape.

Education

Master of Science, Data Science

June 2024 – June 2026

CHRIST (Deemed to be a university), Bengaluru

CGPA: 3.33/4.0

Coursework: Machine Learning, Deep Learning, NLP, Statistical Inference, Data Engineering, Computer Vision

B.Sc. in Physics, Chemistry and Mathematics

2019 – 2022

Lachoo Memorial College, Jodhpur

Technical Skills

AI & Prompt Engineering: Prompt Optimization, System Prompt Design, Few-Shot & Chain-of-Thought Prompting, Context Window Tuning, Conversation Flow Design, Agent Red-Teaming, Hallucination Mitigation

LLM & Agentic AI: LangChain, LangGraph, OpenAI API, Google Gemini, Llama 3, Groq, Claude Code, RAG Pipelines, FAISS, Vector Databases, Workflow Automation

Voice & Conversational AI: Voice Bot Development, IVR Flows, Multi-turn Dialogue, Intents & Context Management, Multilingual AI Deployment, TTS/STT Integration

ML & Dev: PyTorch, TensorFlow, Keras, CNNs, FastAPI, REST APIs, Docker, Git, MySQL, MongoDB, Streamlit, SHAP, LIME

Professional Experience

AI Developer

Apr 2026 – Present

Examon AI, Singapore (Remote)

- Design, optimize, and deploy agentic AI workflows for IB exam-style question generation; iterate on prompt pipelines and evaluation criteria to achieve measurable quality and accuracy improvements.
- Leverage Claude Code and advanced LLM tooling to increase workflow autonomy, reduce manual intervention, and accelerate feature delivery.
- Build and test new product features—personalization engines and knowledge-mapping—in isolated environments before full-stack deployment.
- Collaborate with Founder (CEO) and Co-Founder (COO) on product strategy and technical roadmap; translate business goals into engineering priorities.

Data Science Intern

Apr 2025 – Jun 2025

Agastya International Foundation, Bengaluru

- Architected Python-MySQL ETL pipelines processing 100K+ student records, automating 5 reporting workflows and reducing cycle time from ~3 days to under 4 hours (**40% reduction**).
- Engineered K-Means clustering on engagement data; identified 4 behavioural segments, improving resource allocation accuracy by **15%**.

Research & Publications

Structural and Genomic Prioritization of Autism Risk Genes Using Machine Learning

2026

ICIICS-2026, IEEE Bangalore Section — Accepted, Oral Presentation

Gradient Boosting classifier achieving AUC 0.962 with SHAP-based feature interpretation for autism risk gene prioritization.

Projects

NutritionNet – AI Health Scanner [GitHub]

2025

M.Sc. final-year system for nail and skin health analysis using MobileNetV3Large + EfficientNet-B4 ensemble. Full pipeline: data ingestion, multi-model training, ensemble fusion, live Streamlit deployment.

Stack: PyTorch, MobileNetV3Large, EfficientNet-B4, Streamlit

NebuEye – RAG Chatbot [GitHub]

2025

RAG chatbot (LangChain + Gemini-1.5-flash + Llama 3) for PDF Q&A. Iterated extensively on system prompts to reduce hallucinations and handle edge cases across multi-turn context. Live Streamlit deployment.

Stack: LangChain, FAISS, Gemini API, Llama 3, Groq, Streamlit

Melos – Emotion-Aware Music Generation [GitHub]

2025

VAE-Transformer for emotion-conditioned piano generation (8 categories). Iteratively tuned emotional-context inputs; achieved 78% emotion alignment, 0.42 FAD on 200K+ audio samples.

Stack: PyTorch, Librosa, TorchAudio

AI Defect Detection System [GitHub]

2025

CNN visual inspection for 15 industrial categories (81% accuracy, MVTec). SHAP/LIME explainability; FastAPI + React + MongoDB deployment. Designed human-readable diagnostic outputs for non-technical users.

Stack: PyTorch, FastAPI, React, MongoDB, SHAP, LIME
